

Lesson 4 conductor and insulator

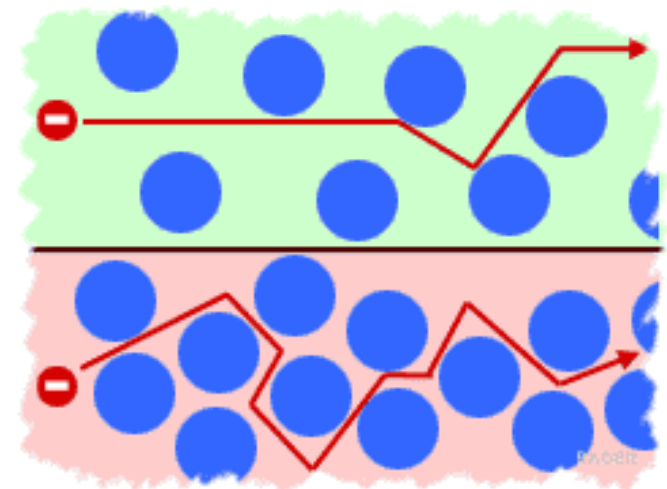

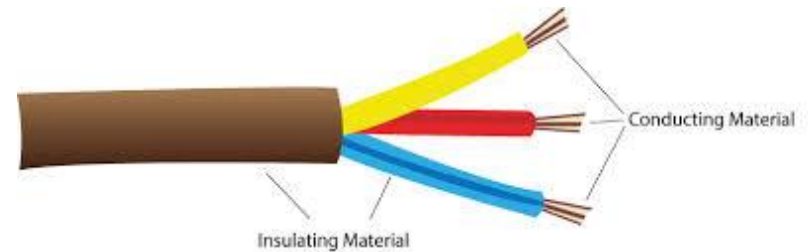

Can we humans
allow electric
current to pass
through easily?

Conductors and Insulators

Conductors allow electricity to flow through easily

Insulators don't allow electricity to flow through

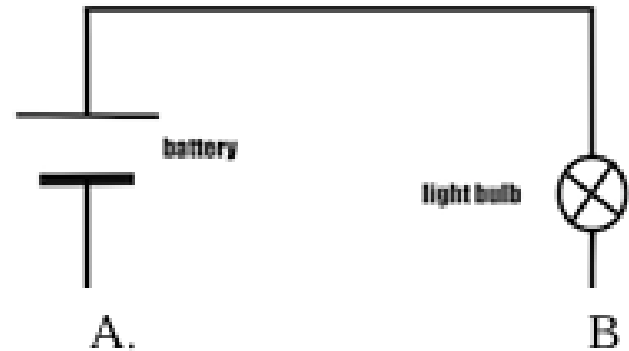

THE SMOOTHER TOP PATH
SHOWS A GOOD CONDUCTOR.
THE BOTTOM IS POOR.

investigation

Method:

1. Create a circuit according to the circuit diagram.
2. Connect different materials between A and B.
5. Write down how the material affects the light bulb on table(P16).

Copper

Silver

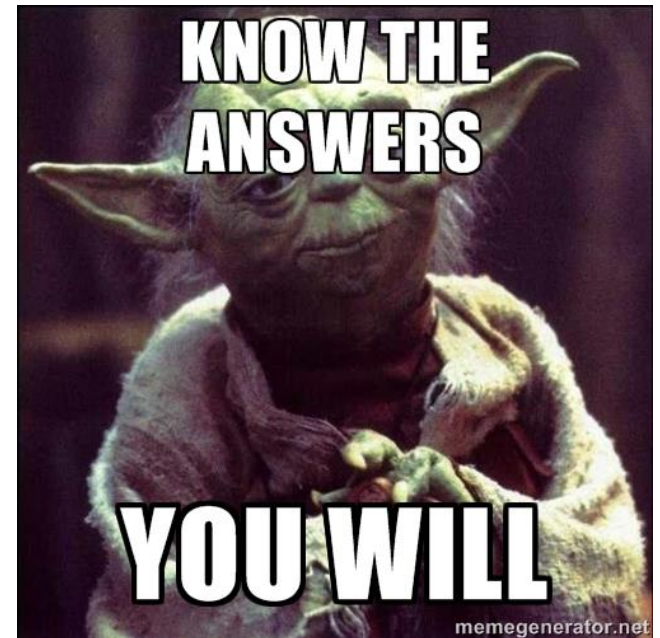

Wood

Conductor or insulator?

Material	Conductor or Insulator?

Conductors vs Insulators

Pencil	Ruler	20 cent coin	Plastic Spoon	Metal Spoon
Piece of Paper	Key	Aluminum Foil	Piece of Wood	Piece of String

Conductors allow electricity to pass through it easily.

Insulators: much more difficult for electricity to pass through it.

Conductors vs Insulators

Pencil	Metal Ruler	20 Cent Coin	Plastic Spoon	Metal Spoon
Piece of Paper	Key	Aluminum Foil	Piece of Wood	Piece of String

Conductors have very little resistance, and allow electricity to pass through it easily.

- Metal Ruler
- 20 Sent Coin
- Metal Spoon
 - Key
- Aluminum Foil

Insulators have a very large electrical resistance, and is much more difficult for electricity to pass through it.

- Pencil
- Plastic Spoon
- Piece of Paper
- Piece of Wood
- Piece of String
